Contribution Journal

Brian — Contribution

I contributed to the Lab 04 assignment by working through the code and creating an explanation throughout the notebook. I also helped add and improve comments in the code so that the purpose of each section was clear, checked the correct variables were being used, and helped explain the results from the graphs and data analysis. I participated in discussions on various parts of the lab and helped review the notebook to make sure the sections were complete and understandable. In the end, I also contributed to the coding part in the end with my team.

Toan — Contribution

I contributed to the project by working directly with the code and running the different cells in the notebook. I helped test the code, check the outputs, and make sure the graphs were displayed correctly. I also looked for errors or unexpected results and helped fix issues by checking the code and running the cells again to make sure everything worked properly. During the lab, I discussed the results with my team members and helped compare our outputs to the lab requirements. I also helped make sure the required sections were completed and that the final notebook had the correct outputs. Overall, my main contribution was testing the code, checking

the results and graphs, helping solve problems, and making sure the notebook was working correctly before submission.

Montserrat — Contribution

I contributed by helping analyze the results and review the visualizations created in the notebook. I helped look at the graphs and data outputs to make sure they made sense and supported the questions being asked in the lab. I also participated in the coding and discussions, helped review the completed sections, and worked with the other team members to make sure the final notebook was complete. I also reviewed the spelling grammar to make sure corrections are made. Finally, we worked together to run through the completed notebook, review the code and outputs, and make final corrections before submitting the assignment.
